In the Abstract:

Please amend the Abstract of Disclosure as follows:

The invention relates to an analysis unit for the preparation of samples, comprising at least one ~~through-flow~~ flow through unit which is made of plastic and provided with a micro-structured channel system, an adapter chamber which reversibly accommodates the ~~through-flow~~ flow through unit and at least one detector. The invention is characterized in that at least one channel section is provided with fluidic connections on the respective ends thereof and is used to charge sample volumes ranging between 0.1 and 20µl with a deviation of less than 5%, for the most part 1-5%.
